iTANZ
When Performance And Quality Matter

From the meter to the money.

Deep domain. Proven delivery. Measurable outcomes.

iTANZ delivers connected solutions for power, water, district cooling and local government, built on Oracle platform capabilities, our own IP, and a clear method that scales.

WHAT WE DELIVER

- Customer Experience
- Meter Data Management
- Customer Care and Billing
- Asset Management
- Network and Outage
- Data and Analytics

DELIVERED AT UTILITY SCALE

Over 4 million
connections
Southeast Asian distributor

~2.5 million
customers
South Asian utility

~470,000
connections
Gulf utility

- Head-end estates in one flow
- Multi-vendor integrations
- Asset types across infrastructure and networks

THE UTILITY LIFECYCLE, CONNECTED AND INTELLIGENT

Customer & Growth → Meter to Cash → Assets & Field Ops → Network & Outage → Data & Analytics

Industry journeys powered by integrated data and intelligence.

Industry Platforms • Systems Integration • Managed Operations

A domain-led technology and transformation company.

iTANZ
When Performance And Quality Matter

THE iTANZ APPROACH

The utility lifecycle, engineered end to end.

We understand how utilities operate. We engineer the platforms and integrations that run the business. We operate them with accountability that carries past go-live.

Understand in context
The operating reality before the technology.

→

Engineer for outcomes
Platforms and integration around the lifecycle.

→

Operate with accountability
Service assurance, data completeness, reproducibility.

CAPABILITY ACROSS THE ORACLE UTILITIES TRACKS

Customer Care and Billing (CCS and CC&B)	Meter-to-cash, rating, payments and collections, configured to each utility.
Meter Data Management (MDM and AMS)	The data hub between the metering estate and the enterprise, across multi-vendor systems.
Asset Management (WAM, WACS, Field Service)	Asset register to work order to field execution, costed back to finance and the ledger.
Customer Experience (CX4U)	Self-service, service management and CRM, engineered to utility and regulatory schemes.
Integration and Data Migration (SOA, OIC, API)	Multi-system orchestration and reconciled migration on every engagement.

DATA, ANALYTICS AND AI LAYER

Predictive Maintenance · Demand Forecasting · Leak Detection · Optimization · Anomaly Detection · Analytics & Reporting · Data Governance

Intelligence embedded across customer, meter, asset, network and operational data.

INTELLIGENCE WITH A CLEAR BOUNDARY

Agentic AI across customer, billing, network, asset and field. Agents watch, recommend and prepare. People remain in control of consequential decisions.

Customer Agent → Billing Agent → Network Agent → Asset Agent → Field Agent

It never calculates a charge.

DELIVERED WHERE UTILITIES ACTUALLY RUN

Power distribution
South Asia, Southeast Asia and the Gulf

Water
Australia across three states

District cooling
United Arab Emirates

Municipal utilities and councils
Australia (VIC, QLD, WA, ACT)

Electricity network programs
Australia, South Asia and the Gulf

PRODUCTION-PROVEN ACCELERATORS

- Config-driven rating engine
- Billable-charge upload framework
- Asset-to-finance posting pattern
- WAM validation and bulk load
- CX integration suite
- Data migration and reconciliation kit
- BI Publisher templates
- Multi-owner billing and payment accelerator

OUR DELIVERY METHOD: CLEAR

C — Contextualize
The lifecycle as it runs today.

L — Locate the gap
Where revenue leaks, risk and audit exposures occur.

E — Engineer for execution
Target architecture, integration and cutover plan.

A — Activate accountability
Owners, sign-off packs and reconciliation proof.

R — Run and evolve
Managed operations and cycle assurance beyond go-live.

OUR COMMITMENT

Partner, not supplier.
We solve alongside your team.

Outcome focused.
We measure what matters.

Transparent and collaborative.
Open books, shared success.

Built to last.
Configured, not coded from scratch.

Platforms that understand.
Transformation that delivers. Outcomes that last.
